## **[ RELEVANCE ]**

Immunoglobulin E (IgE) is a class of antibody that has been found only in mammals. IgE's main function is immunity to parasites such as parasitic worms. IgE also plays an essential role in the immediate hypersensitivity states, such as asthma, hay fever, atopic dermatitis, and other well-known manifestations of atopic patients. IgE is present in normal individuals at very low concentrations, only 0.05% of the Ig concentration.

## **[ ANTIBODY SPECIFICITY ]**

The antibody is a caprine polyclonal antibody raised against IgE. It has been selected for its ability to recognize IgE in immunohistochemical staining and western blotting.

## **[ APPLICATIONS ]**

Western blotting: 1:100-400

Immunocytochemistry in formalin fixed cells: 1:100-500

Immunohistochemistry in formalin fixed frozen section: 1:100-500
